Quick Strat

3-Steps to create a new theme

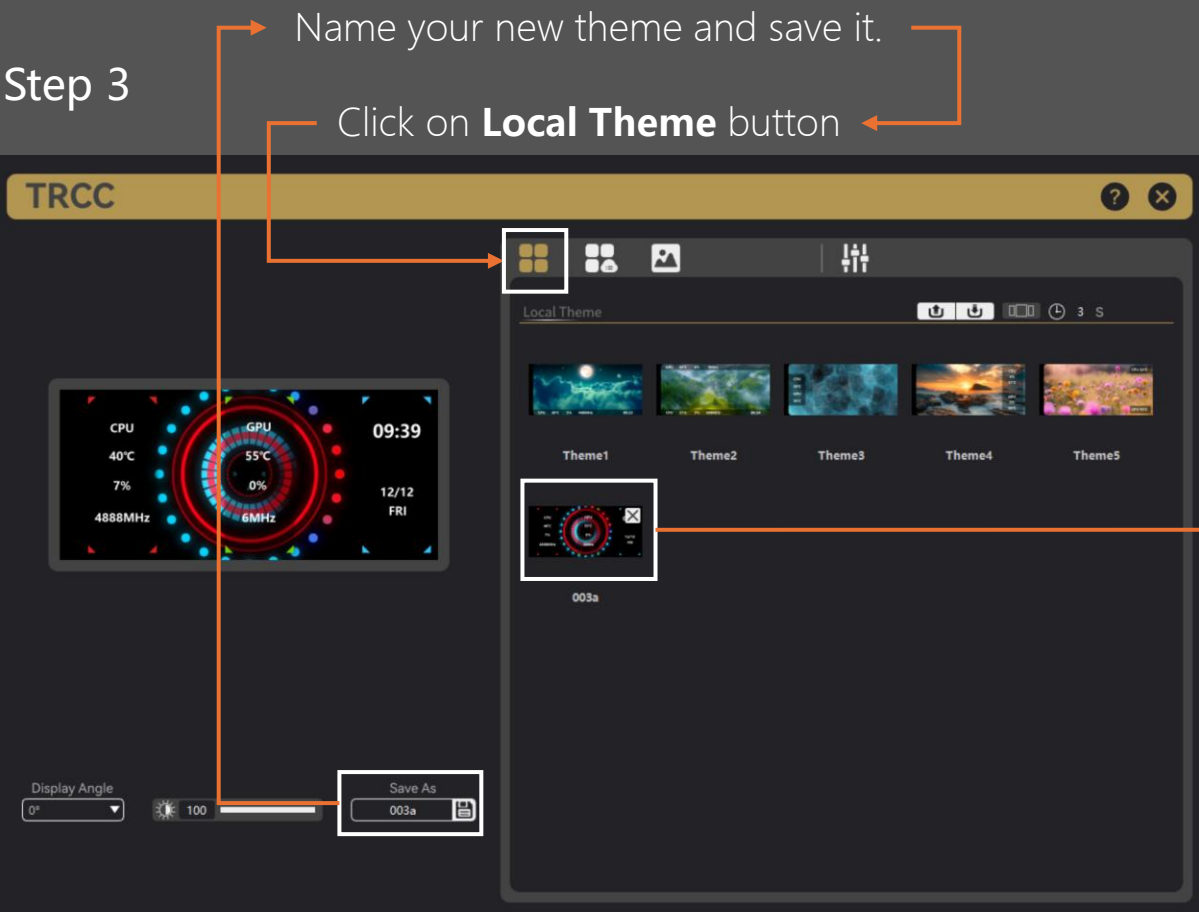

Step 1

Step 2

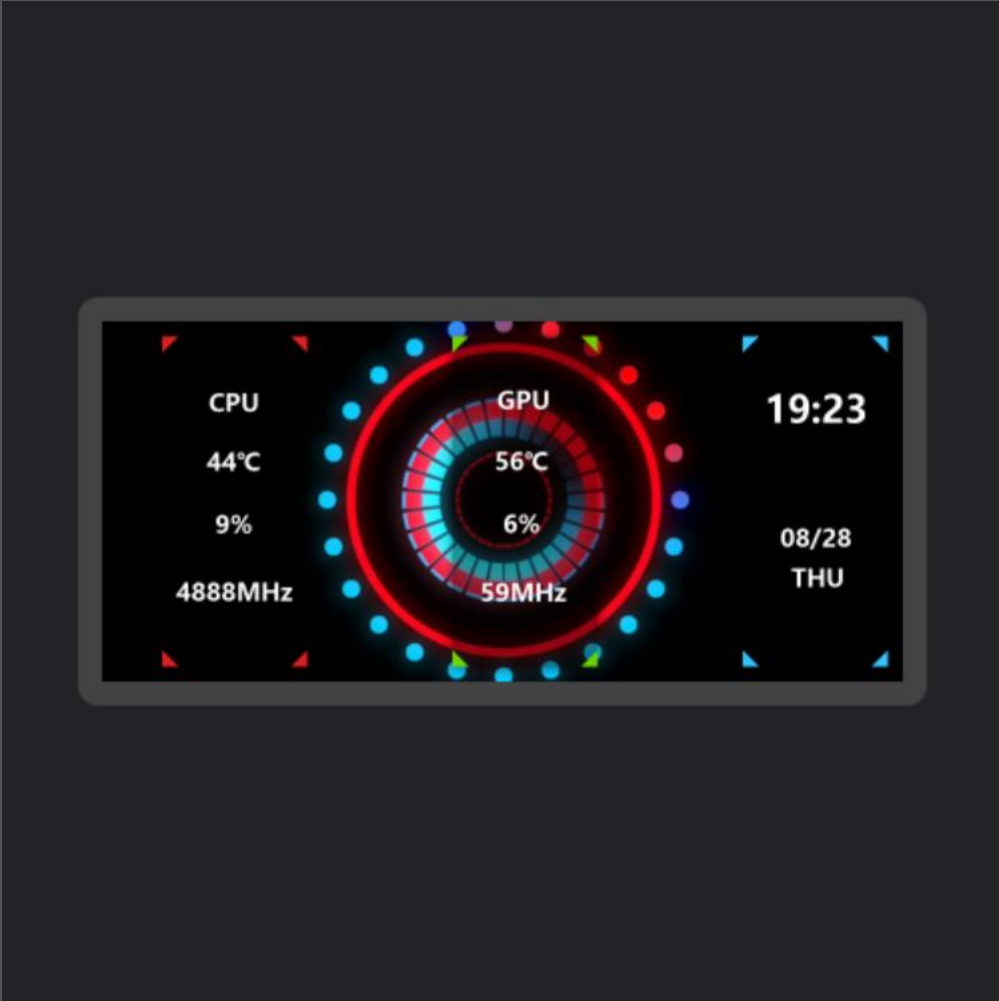

Step 3

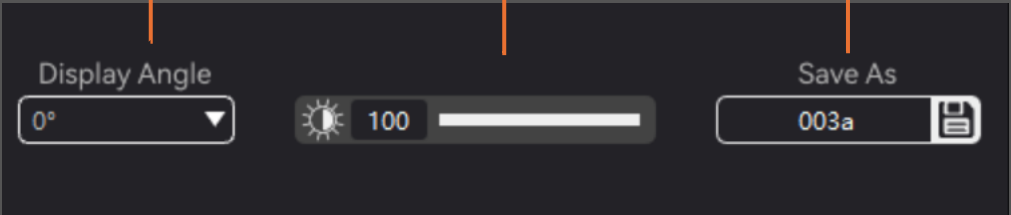

You will see this theme on the **Local Theme** page

Preview Box

The Preview Box is synchronized with the Display. You can use the mouse to drag the information in the Preview Box. After adjusting, click **Save As**. You can use the keyboard WASD to adjust the position in units of 1 pixel, and shift+WASD to adjust the position in units of 10 pixels. For products with large screens, you need to double-click to pop up a large-size preview box, which can also be edited.

Basic Function Introduction

Display Angle: Select screen orientation as needed.

Screen brightness: Adjust the screen brightness.

Save As: Enter a name for the theme in the text area.
Click the button on the right to save the theme to the local theme.

Local Theme

Display the themes saved locally

Displays a list of online background.After clicking, they will be downloaded to the softwarecache and then loaded into the preview box.
After the user configures other information, it can be saved to the local theme.
Note: The Gallary depends on the network,and the download time depends on the current network speed.

Theme Edit Area

The screenshot displays the Luma 5.2.1 software interface, which is used for creating and editing digital art. The interface is divided into several sections:

- Top Section:** A dark grey bar with a toggle switch labeled "Text/Value" and a button labeled "Double click to delete card". Below this is a grid of widgets including "THU", "19:30", "08/28", "TEMP 49 °C", "Clock 4888 MHz", "Usage 14 %", "CPU", "TEMP 58 °C", "Clock 119 MHz", "Usage 12 %", and "GPU".
- Right Section:** A color picker widget with a "Coordinate" field showing X=0 and Y=0. It includes a "Font" dropdown set to "微软雅黑" (Microsoft YaHei) and a "Colour" field with a color swatch. Below the color swatch is a "R 255 G 0 B 0" field and a "Load" button.
- Bottom Left Section:** A "Layer mask" widget with a toggle switch and a "Load PNG" button. Below it is a "Push flow" widget with a "X" field set to 0 and a "Y" field set to 0, both with "+" and "-" buttons.
- Bottom Right Section:** A "Background" widget with a "Load IMG" button and a "Load Video" button. Below it is a "Media player" widget with a "Load Video" button.

Orange lines are drawn across the image, highlighting specific elements: a line from the "Text/Value" toggle to the "Layer mask" widget, a line from the "Double click to delete card" button to the "Push flow" widget, and a line from the "Coordinate" field to the "Load" button.

Add Card: Adding new values. Double-click to delete a card.

- ▶ Loading mask image

Note: The mask image is a layer between the information layer and the background layer. Used for layout and decoration, supports transparent layersThe file format is PNG.

➤ Switch: Turn all Cards on and off.

- Card module coordinates: Displays the coordinates of the currently selected card on the screen, Displays the coordinates of the currently selected card on the screen, and you can also enter a value to move the position.
